

Wet lap cutting with improved quality

The Sigma cross cutter for wet hardboard plants has an extremely light crosscutter carriage, which is connected to the wet lap conveyor drive to ensure optimum synchronization. Cutting is by either water-jet-nozzle or mechanical saw, for both cross-cutting and edge cuts.

SIGMA SERVICE AB

Advantages

- Cross-cutting perpendicular to the line thanks to synchronization with the conveyor
- Very accurate length of the wet lap regardless of wet lap thickness and machine speed
- No dangerous sharpening of saw blades.
