Parameter Value Reference value

Name: **Ridgebow's Rollick Raz of Navy**  
Pedigree-ID: **S 53256/2008**  
Chip-ID: **752098100531605**  
Tattoo-number: **53256Y**

Degenerative Myelopathy - PCR

Result: Genotype N/N

Interpretation: The dog is homozygous normal concerning the intact SOD1-gene. The dog does not carry the mutation in SOD1 that is suggested to be a major risk factor for the development of Degenerative Myelopathy. The dog can pass only the normal gene on to all its offspring.

The current result is only valid for the sample submitted to our laboratory. The sender is responsible for the correct information regarding the sample material. The laboratory can not be made liable. Furthermore, any obligation for compensation is limited to the value of the tests performed.

There is a possibility that other mutations may have caused the disease/phenotype. The analysis was performed according to the latest knowledge and technology.

The laboratory is accredited for the performed tests according to DIN EN ISO 17025 (D-PL-13186-01). (except partner lab tests).
