

EyesOnSite™

Operator Station

A workplace for monitoring of live video and review of recordings from many smartphones or pads over wireless data networks

*The control room front where incoming video feeds from your field personnel's smartphones/pads are instantaneously presented. Creates productivity for your organization of field technicians. No more cryptic explanations and costly misunderstandings, just crisp clear live action - this is what **VideONet™ EyesOnSite™** can give you*

EyesOnSite™ Operator station consists of:

- An EyesOnSite™ Operator station client software for live monitoring of incoming feeds and review of recorded video.
- A Standard Windows PC with keyboard, mouse and a monitor.

The EyesOnSite™ Operator stations are Windows workstations with one or more monitors. Incoming feeds are presented in a multi view screen in incoming order. The recorded video is accessible immediately after transmission.

Several operator stations in parallel can work with incoming video feeds, either with the same feeds or with different feeds.

Recorded video can be accessed from any, so designated, workstation by authorized operators.

The recordings can be reviewed and exported to avi format for archiving or further investigations.

EyesOnSite™ Specifications	
Smartphone requirements	
OS	iOS & Android* (* Android app available after Q1 2016)
Communications:	Mobile data or Wifi
HW requirements:	OS Supported camera , minimum 720p resolution
