

GRADUATE SCHOOL PRODUKTION2030

2017-02-23 Directed call for courses

The Graduate School Produktion2030 is part of Produktion2030's Instrument of Education. It launched in 2014 and now proudly offers a wide range of courses within product and production development from key competences in Swedish universities and companies.

We continuously strive to improve our portfolio and are now looking to expand our offerings in two of Produktion2030's areas of strengths, **Virtual Production Development and Simulation** and **Circular Production Systems and Maintenance**.

This call has no deadline; proposals for new courses are evaluated in our biannual reference group meetings. Suggested courses can be accepted with or without funding from the graduate school. All accepted courses are added to the course portfolio and are advertised on the graduate school homepage, which facilitates for course providers to find course attendants.

For more information about Produktion2030, visit their website: www.produktion2030.se/en/. For more information about how to propose a new course to the graduate school, visit our website: www.p2030graduateschool.se/.
