A FAMILY TRADITION SINCE 1946

Wool is one of the trendiest and most eco-friendly textiles on the market. Wool is a renewable and natural material, which makes it one of our most sustainable material resources in the world.

We love wool and we love production! Our skills are built upon several generations of experience and competence.

Sustainability and sustainable fashion have built our collections long before it was a well used concept within the textile industry, partly because wool has always played a central role, but also because we produce in Sweden and Europe.

We are one of very few textile manufacturing companies in Sweden, and in our knitting department in Gällstad we knit approx. 90% of all our production.

IVANHOE HOME COLLECTION

The increasing demand of taking your responsibility and both producing and consuming with future generations in mind, is the main reason why we now present our Ivanhoe Home Collection.

The home collection is lovingly based on offcuts and surplus material from our production; yarn, buttons and knitted materials are reworked and refined to be given a new life and new perspective. Colours and paterna are determined by availability resulting in unique, eco-friendly and beautiful home interior details warming both body and soul.

The home collection is an important part of our work towards a more responsible and sustainable manufacturing process. It is all about maximising use and minimizing waste - reclaim and reuse.
