## PennyTalks (PT)

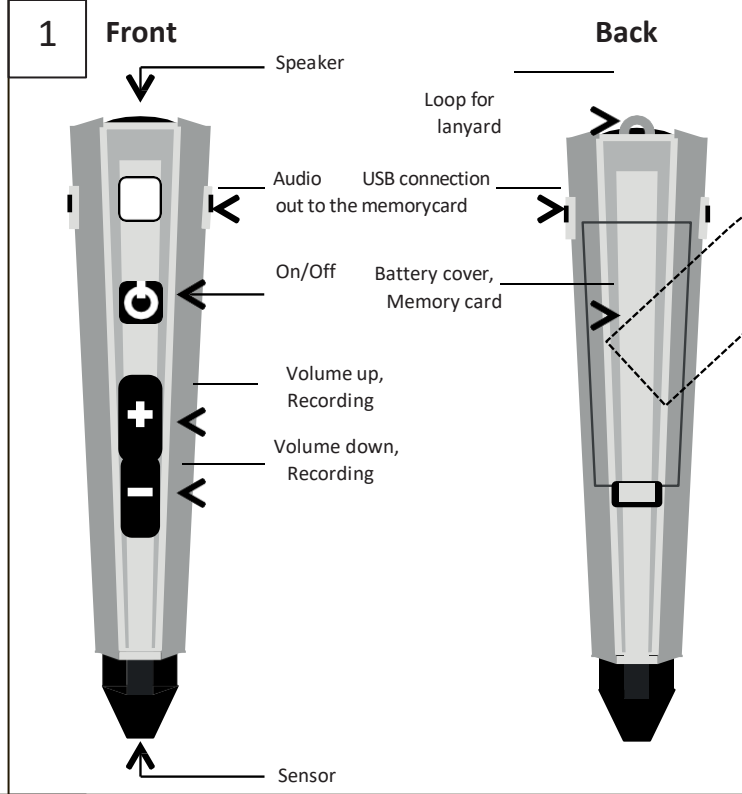

The personal digital voice labeler with speech supported user instructions and real-time backup.

### Quick guide:

Put a self-adhesive label to whatever you would like to memorize.

Hold the sensor to the label and record your own voice memo in PT.

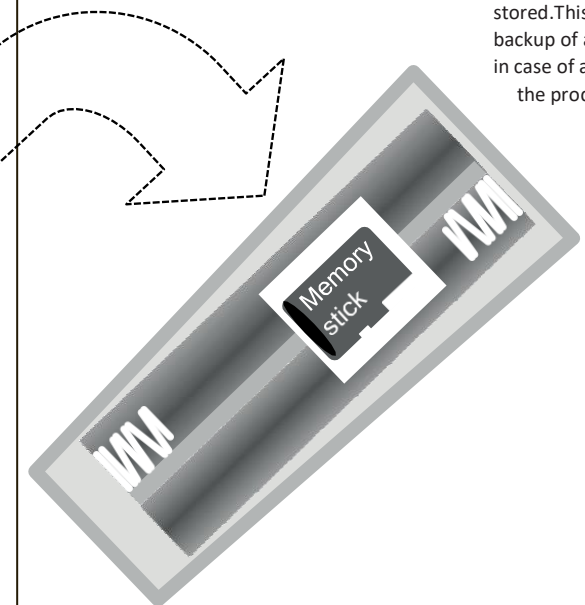

Playback your voice memo by holding the sensor of PT to the pre-recorded label.

2

### Memory card is underneath the batteries:

PT is equipped with a 8 GB removable memory card where all your memos are stored. This is an automatic backup of all your memos in case of any damage to the product.

3

### Switch on/switch off:

Insert the batteries. Press and hold the green button on/off button for 3 seconds.

If PT is left without any activity for more than 120 seconds, it will automatically switch off.

### How to set the language of the speech supported user instructions:

PennyTalks holds 18 pre-stored language modes for the speech supported user instructions.

A chime signal mode support function is available as well.

1. Touch to any of the languages available on the language setting chart with the sensor.
2. PT reports chosen language and which is now selected.

4

### Volume control:

Press any of the + (yellow) or – (red) keys to raise or to lower the volume.

### To record a label memo:

1. Touch the label with the sensor until PT reports "This is a new label".
2. Press and hold any of the + (yellow) or – (red) buttons until PT commands "Start recording".
3. Keep holding the button and record your memo.
4. When recording is done, release the button.
5. Your memo is now stored and PT reports "Recording is done"

### Playback:

Hold the sensor to the label. PT now reports your recorded memo.

5

### Erase a recorded label memo:

1. Touch the label with the sensor.
2. PT starts to report your pre-recorded memo
3. Press and hold **BOTH** + (yellow) or – (red) keys until PT reports "Erased".

Actual label is now ready to be re-recorded.
